Re: Metalflex paint results

Neil,

We have a Garden Centre Section under a 2.7m High enclosed verandah which covers approx. 100 square metres.

During the summer months the temperature quite often reaches 52 degrees C and as you can imagine this is too hot for staff, customers and some of the goods we merchandise in this area.

During the month of December 2005 we had Adam Wannan from Top Coat Home Improvements apply the required coatings of METALFLEX to this area of our shop.

The results have far exceeded our expectations although they have met almost exactly your claimed temperature reductions.

During our recent burst of 40C days the temperature would have been well into the low to mid 50s and our staff was delighted to report the temperatures were now in the very low 30s and the conditions were almost cool to work in.

I cannot praise the product, your company and the tradesman enough for the work and superb quality of the product and the obvious results.

Your company is more than welcome to recommend us if anyone requires to feel the proof of the pudding (so to speak). We are open 7 days a week and people can just walk through without any hindrance to feel the effect.

Thank you for product and attention to detail.

Norm Hauth. Owner
